

THREADLINE — CURRENT TODO + DAILY OPERATING COCKPIT — FINAL

5 September 2026

RULE ZERO

Do not run the business from memory. Operate from states, queues, next actions and due dates.

PHASE 0 — FINAL BUILD / SETUP

Do these once, then stop optional building.

[x] Claude FINAL WORKING pass completed against the full resource pack; review latest handoff/output before any further build.

[x] Living SOP Engine V1 built: market validation, prospect qualification, A/B outreach, reply-to-booking, pre-call prep and sales-call state map.

[] Connect or at minimum link external CRM records (Attio preferred; Pipedrive acceptable). Do not build a replacement CRM.

[x] Today/cockpit built with acquisition quota, remaining touches, research/value tasks, replies, follow-ups, calls, prep and overdue items.

[x] Invariant enforced: no active record without next action + due date.

[] QA only the workflows required before client #1.

PHASE 1 — CHOOSE / VALIDATE FIRST WEDGE

[] Select 2–3 plausible first-wedge candidates using profitability, pain, reachability, familiarity/access and proof similar services are purchased.

[] Choose ONE active hypothesis to immerse in first.

[] Build qualification criteria.

[] Estimate qualified prospect-pool depth for each candidate wedge: realistically reachable accounts above the fit/economic threshold, planned outreach velocity, and approximate time-to-pool exhaustion.

[] Immerse: websites, founder content, competitors, offers, buyer language, objections, sales pages, comments and market discussions.

[] Write 10–20 recurring problem hypotheses/symptoms.

[] Conduct ~5 research conversations without forcing a sale.

[] Log exact VOC and repeated expensive pains.

[] If no repeated pain, interview more/change hypothesis. Do not build.

[] Once a strong pain appears, run small Commercial Response Validation batches.

[] Compare positive reply, booking and qualification quality.

[] Freeze first wedge + expensive problem + qualification + headline outcome only when evidence supports it.

PHASE 1.5 — SYNTHETIC CLIENT DRY RUN

Run this after a provisional wedge is chosen and enough immersion exists to model a realistic company. Do it in parallel with research outreach / while waiting for human replies; it must not delay real market conversations.

- [] Pick a real company in the chosen wedge and treat it as an imaginary client using public information only; clearly label assumptions.
- [] Run the real Threadline fulfilment loop end-to-end: onboarding/Brand Brain → research → ICP/competitors → diagnosis → positioning/strategy → pillars/tests → 6–8 scripts → recording readiness → production → QA → approval/revision simulation → packaging/distribution plan → mock weekly/monthly report.
- [] Time every active minute by task; separate active labour, coordination/context-switch overhead and waiting/client dependency time.
- [] Deliberately inject realistic failure cases: one script rejection, one major revision, one missing asset/input, one late approval and one poor/awkward recording outcome.
- [] For 2–3 sample videos benchmark three production paths on the same footage: AI-heavy, human editor, and hybrid AI-first + human polish. Score quality, brand fit, correction time, cash cost, turnaround, revision burden and reliability.
- [] Record what required judgment, what was repetitive, what could be automated/delegated, what information was missing and where the SOP failed to tell the operator what to do next.
- [] Produce a pre-client Delivery Load estimate, but label it SYNTHETIC / UNVALIDATED until real client cycles exist.

PHASE 2 — LAUNCH GATE

- [] Browser QA: 1440 / 1024 / 768 / 390.
- [] Operator/client permission QA.
- [] Teleprompter/fullscreen/print/critical flow QA.
- [] Production deployment + PostgreSQL + smoke test.
- [] Secrets/session/demo-password hygiene.
- [] Final exact scope/term/exclusions/risk reversal.
- [] Agreement/SOW/proposal ready.
- [] Payment/invoicing ready.
- [] Booking flow ready.
- [] Production path benchmarked. Prefer AI-heavy or hybrid editing where quality is acceptable; maintain primary + backup human editor capacity only for exceptions / polish / overflow where the benchmark proves it is needed.
- [] External CRM ready.
- [] Prospect list / qualified universe ready.
- [] Prepare wedge-specific outbound layer for the validated wedge: ICP language, pain, examples, hooks, proof, qualification and CTA. Use the same core Threadline offer/fulfilment underneath; personalise cold email + LinkedIn and, where compliant/appropriate, SMS by wedge.
- [] A-tier pre-completed-value asset templates ready.

PHASE 3 — REVERSE ENGINEER ACQUISITION

Set target: 2 retained clients = £5k MRR.

Formula: required first touches = target wins ÷ (booking rate × show rate × qualification rate × close rate).

Daily quota = remaining required touches ÷ remaining acquisition workdays.

Use assumptions only until real Threadline data exists.

DAILY COCKPIT — WHAT YOU SHOULD SEE WHEN YOU OPEN THREADLINE TODAY

- Required new qualified first touches: X
- Completed: Y
- Remaining: Z
- A-tier prospects needing research/pre-completed value/Loom: X
- B-tier prospects outreach-ready: X
- Replies requiring action: X
- Follow-ups due: X
- Sales calls today: X
- Pre-call prep incomplete: X
- Proposal/deal follow-ups: X
- Overdue tasks: X
- Client blockers/approvals: X (after client #1)

DAILY EXECUTION ORDER

1. External revenue action before optional building.
2. Clear replies/follow-ups that can create a booking or close.
3. Complete today's scheduled sales-call prep.
4. Complete required new first-touch quota.
5. Complete A-tier Loom/pre-completed-value tasks.
6. Only then do lower-priority admin/content/build work.

PROSPECT WORKFLOW

NEW_PROSPECT

- ☐ Verify market/wedge fit.
 - ☐ Check qualification criteria.
 - ☐ Determine likely economics/ability to pay.
 - ☐ Assign A / B / reject.
- Next state: QUALIFIED_A / QUALIFIED_B / NOT_FIT.

QUALIFIED_A

- ☐ Review website.
 - ☐ Review founder LinkedIn/content.
 - ☐ Find one specific achievement/content asset.
 - ☐ Identify likely content/demand constraint.
 - ☐ Find one useful market/competitor/content opportunity.
 - ☐ Create pre-completed-value asset.
 - ☐ Record personalised Loom if justified.
 - ☐ Send outreach.
 - ☐ Set next action + due date.
- Next state: CONTACTED.

QUALIFIED_B

☐ Research enough to make outreach specific and truthful.

☐ Send scalable personalised outreach.

☐ Set next action + due date.

Next state: CONTACTED.

CONTACTED

☐ Follow-up on due date if no reply.

☐ If reply arrives, classify immediately.

Reply states: INTERESTED / CURIOUS / SEND_INFO / NOT_NOW / OBJECTION /
REFERRAL / NOT_FIT / BOOKED.

INTERESTED / CURIOUS / SEND_INFO / OBJECTION

☐ Diagnose what the response actually means.

☐ Send the smallest useful reply/asset.

☐ Move toward booking when fit.

☐ Always set next action + due date.

BOOKED

☐ Review company/business model.

☐ Review application/previous conversation.

☐ Understand offer economics / customer value.

☐ Review current content.

☐ Form primary constraint hypothesis.

☐ Prepare only relevant Threadline demo/evidence.

☐ Ensure reminder sequence is active.

Next state: CALL_READY.

SALES CALL STATE MAP

OPEN

☐ establish agenda and trust.

ECONOMICS

☐ offer value / deal size / LTV / acquisition context.

CURRENT STATE

☐ current content/acquisition machine and what has been tried.

DESIRED STATE

☐ what better looks like and why now.

CONSTRAINT

☐ identify primary bottleneck.

CONSEQUENCE

☐ establish cost/opportunity of leaving it unfixed.

PRESCRIPTION

☐ explain why Threadline fits or say no-fit.

DEMO

☐ show only modules/mechanism relevant to diagnosed constraint.

COMMERCIALS

☐ explain £2.5k implementation + £2.5k/month / 3-month term and relevant scope.

DECISION

☐ WON / FOLLOW_UP / PROPOSAL_PROCESS / NOT_FIT / LOST.

☐ Log exact VOC and objection.

☐ Create next action + due date.

WON

☐ Send agreement/SOW.

☐ Payment/invoice.

☐ Immediate onboarding link.

☐ Create client workspace.

☐ Schedule Brand Brain / kickoff.

☐ Trigger Day-7 installation workflow.

CLIENT #1 — DO NOT OVER-AUTOMATE BEFORE THIS EXISTS

As client #1 progresses, document every micro-step, time it, identify repeatable 80% vs configured 20%, and only then improve the Living SOP Engine for onboarding/delivery/proof.

WEEKLY ACQUISITION REVIEW — FRIDAY

☐ Freeze raw funnel counts.

☐ Calculate booking/show/qualification/close rates.

☐ Recalculate touches needed for target.

☐ Compare channels separately and segment by wedge once adjacent wedge groups are introduced.

☐ Identify first broken conversion.

☐ Change one meaningful variable.

☐ Log learning.

☐ Do not change 5 things at once.

WEEKLY DELIVERY — ONCE ACTIVE

Evidence/performance → strategy → scripts → record → edit/QA → approve → publish → learn.

Track delivery time/client and revision burden.

CLIENT RESULTS TRACKING — SET THIS UP FROM CLIENT #1

☐ Capture Day-0 baseline for prior 30–90 days where available: founder hours, output, cycle/approval time, views/retention, profile/site traffic, enquiries, booked calls, qualified opportunities, pipeline and closed revenue.

☐ Mark each baseline field MEASURED / CLIENT-REPORTED / UNAVAILABLE.

☐ Give every published asset a persistent content/asset ID linked to client, platform, live URL, publish date, pillar/theme and CTA.

- [] Use trackable links/UTMs for owned destinations where possible; preserve raw + tracked URLs.
- [] Ensure external CRM captures source plus opportunity/deal value where available.
- [] Add booking/application source question: how did you hear about us / what content did you see?
- [] Run weekly Commercial Signal Capture for DMs, enquiries, booked calls, opportunities and sales Threadline cannot observe automatically.
- [] Pull platform-native metrics consistently.
- [] Classify commercial evidence: DIRECTLY_TRACKED / BUYER_NAMED_CLIENT_ATTRIBUTED / MULTI_TOUCH_INFLUENCED / ASSOCIATED_CORRELATED / QUALITATIVE_ONLY.
- [] Preserve first-touch and last-touch separately where possible.
- [] Do not claim causality when only influence/correlation is supported.
- [] Build/verify Threadline Attribution V1.5 for the commercially useful outputs clients actually need: tracked content links; touchpoint/session journeys; first-touch, last-touch and linear multi-touch views; form/opt-in/booking capture; opportunity + pipeline + revenue linkage; CRM/payment/manual evidence mapping; reporting by asset, topic, pillar, hook, CTA, platform and campaign; attribution-strength labels; client dashboard + monthly-report integration. Aim for Trakyo-like commercial outputs, not Trakyo-like product breadth. Do NOT build unrelated connectors, ad attribution, fingerprinting, cross-device certainty, ML weighting or generic analytics features without real client demand.
- [] Once data quality supports it, calculate commercially useful content metrics such as booked calls per 10k views, qualified pipeline per 10k views, revenue per asset and value by topic/pillar/CTA.

MONTHLY CLIENT REVIEW

ACTION → RESULTS → PROBLEMS → FUTURE.

Capture proof without overstating causality.

PROOF TRIGGER

When a meaningful win occurs:

- [] Prepare baseline + original constraint + what changed.
- [] Run 20–30 min proof interview.
- [] Create full case study.
- [] Cut testimonial/proof clips.
- [] Add to website/proposal/sales/content.

CAPACITY / HIRING TRIGGER

Hire/delegate when measured Delivery Load reveals stable repeatable work, not because revenue hits an arbitrary number.

Editor funnel: portfolio → paid same-clip test → scorecard → interview → supervised real project → QA → primary/backup pool.

STOP CONDITIONS

Do not:

- create another strategy version because outreach feels uncomfortable;
- build optional integrations before client evidence;
- add pricing tiers without repeated demand;
- promise revenue/views/leads;
- let AI publish or make strategic judgments without approval;
- let an active prospect/client exist without a next action and due date.

THE SIMPLE DAILY QUESTION

Open Threadline → clear highest-value due actions → hit mathematically required acquisition input → run calls using the state map → update states → let the system generate the next step.
